

MOBILE TECHNOLOGY WITHOUT COMPROMISES

10 REASONS TO CHOOSE WAVEPOS

● COST SAVINGS AND SIMPLICITY

As WavePOS is a true native mobile solution, there is no need to purchase and wrestle with Windows Server and Terminal Services software. The end result is a clean, easy and cost reduced mobile POS deployment for restaurants.

● REDEFINES RELIABILITY AND SCALABILITY

In addition to the native application, the WaveSoft Middleware Server - WaveBridge, offers WavePOS a secured transaction based framework for the most reliable and scalable handheld operation in a wireless network.

● ENHANCED USABILITY

WavePOS is not derived from a screen-modified desktop system. It is a result of a complete ground-up software development as a hospitality mobile solution. The workflow and user-interface are specially designed to enhance the usability of handhelds in a restaurant.

● EXTENDED BATTERY LIFE

As a native mobile technology, WavePOS is extremely battery friendly. It gives on average more than twice the battery usage than an always-connected, thin-client mobile solution.

● INNOVATIVE MENU TECHNOLOGIES

As handhelds have smaller screens and are operating next to diners, a good menu system is essential. WavePOS has a fully customizable touch menu system which offers the best look-and-feel of a desktop solution. It also supports multiple item search modes giving servers the most efficient and flexible food ordering process.

● PAY-AT-TABLE READY

The WavePOS solution lets you take orders, print checks and process payments from anywhere in the restaurant, the fully integrated pay-at-table module is fast, secure and approved by PA-DSS.

● OFFLINE ORDERING

No wireless signals, no problem! WavePOS food ordering functions can work totally offline, you can take multiple orders from a patio, poolside, car park or beach, then send everything once you are re-connected to your wireless network, nothing will be lost!

● PERFECT LINE-BUSING SOLUTION

WavePOS can be easily configured for table service restaurants or as a line-busting solution. WaveBridge offers a real-time KDS function which displays all orders sent from handhelds. This add-on module offers a standalone line-busting solution for generating more revenues.

● DYNAMIC SCREEN ORIENTATION

Not only does WavePOS run at a native resolution on many of the latest 4.3" handheld screens, WavePOS application can also dynamically switch to portrait and landscape modes. This dynamic screen orientation support offers users the most unique handheld operating experience.

● MAXIMUM HARDWARE SELECTION

WavePOS is the only software that runs natively on Windows CE, Windows Mobile, Android and iOS operating systems, giving you the maximum selection of the latest handheld hardware in the market.
